

# 360° TRACEABILITY APPLICATION TO TRACE PRODUCT, MATERIAL & PROCESSES

## SCOPE OF WORK

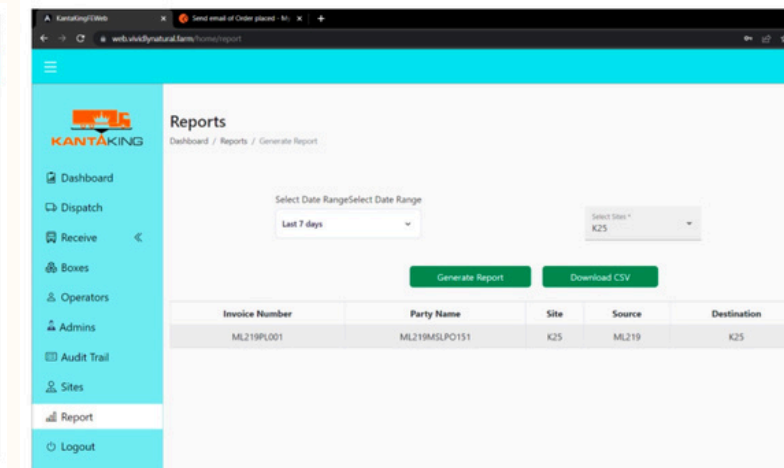

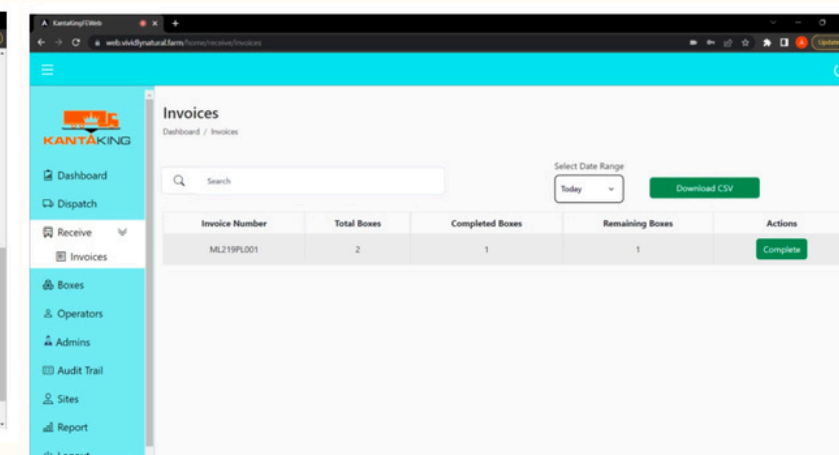

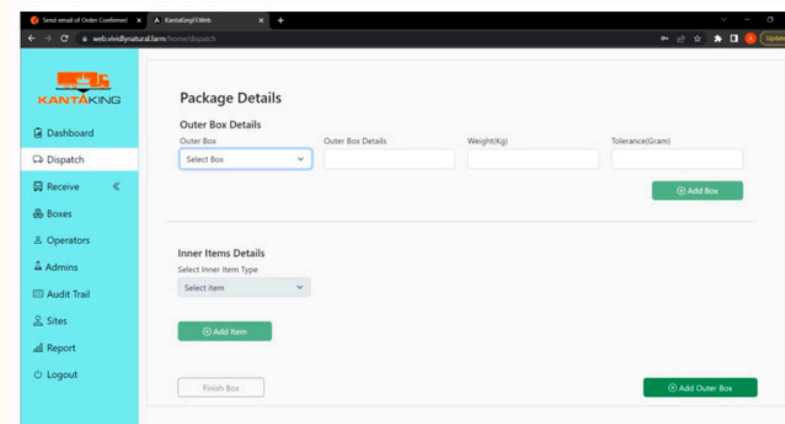

- To conceptualise, design, develop & implement a 360 degree traceability ERP solution to trace product, material & processes.

## KEY ACTIVITIES

- Identification & interaction with key stakeholders for requirements gathering
- Mapping the process flow
- Finalisation of Traceability Technologies
- Defining data standards & designing data capture & storage
- Developing Reports & Analytics
- Training of users
- Deployment

## THE OUTCOME

- The Traceability application enabled end-to-end visibility, allowing the organization to track products at every stage of the supply chain.
- With this application, the organization gained real-time insights into its supply chain operations.
- The application also helped meet compliance requirements by accurately documenting and tracking product information throughout the supply chain.
- By collecting and analyzing data throughout the supply chain, the traceability application provided valuable insights for decision making.
